## Simplicity with ultimate capabilities

- View studies anywhere, anytime on your laptop or mobile device
- Daily workflow requirements are streamlined through smart filters, protocols, and full customization of the viewer's interface.
- Leverage a fully automated workflow to improve efficiency, turnaround time, and patient satisfaction.

Multiple sites can populate exams into a universal work list. Users can create customized search filters to monitor for pending exams or modalities.

Tailor user accounts through administrator rights to control permissions and access to studies.

One-click functionality to import or export studies with other PACS servers, publish to CD/DVD media or compare studies seamlessly.

The solution facilitates radiologists workflow with an ultra-fast streaming engine that enables access to large studies in seconds without compromising image quality.

Complete reporting workflow with advanced reporting tool, add custom header and facility logo; sign-off reports with a digital time stamp and signature.

Ultima users can customize their viewing protocols with multi-monitor support.
